WAIT TIMES

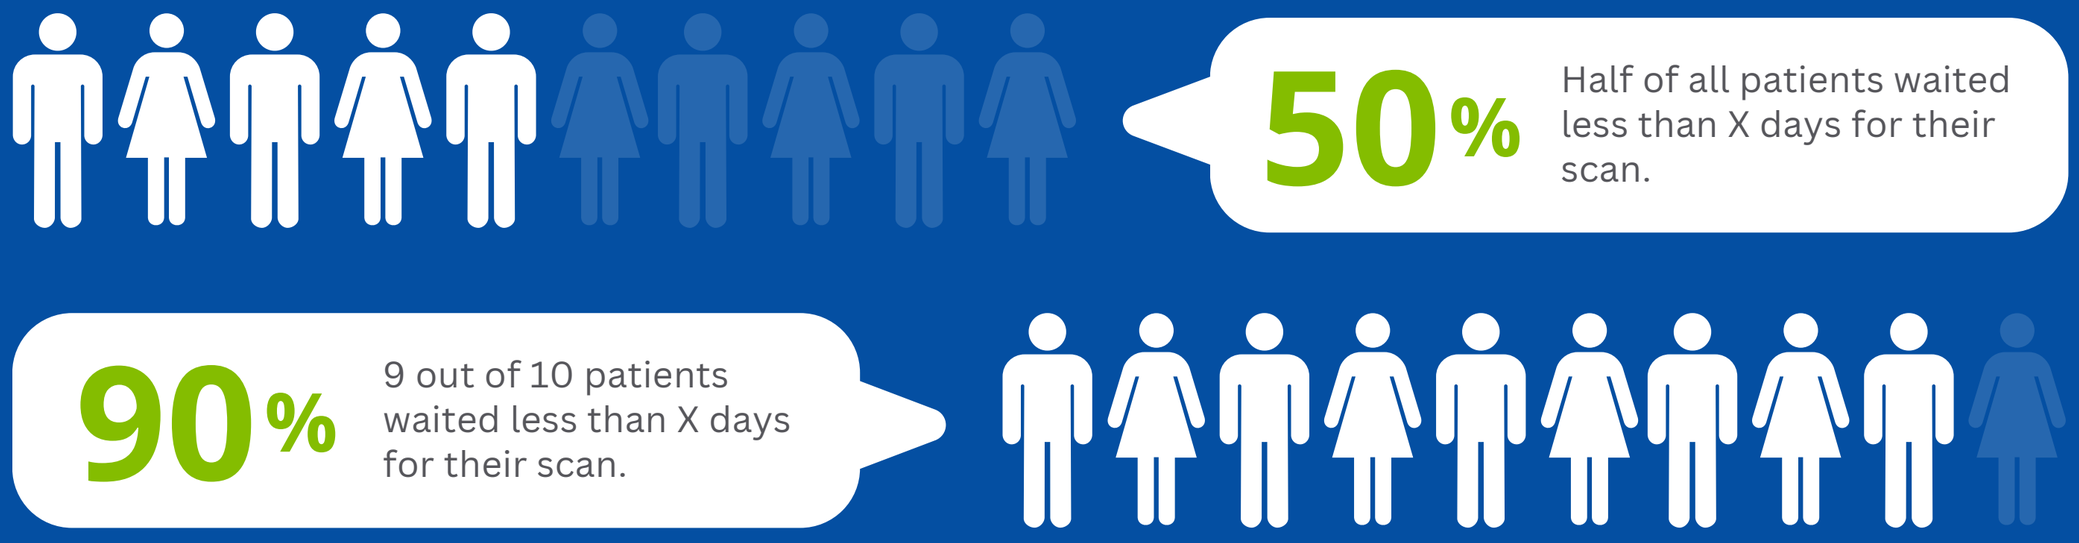
DIAGNOSTIC IMAGING

WAIT TIMES

Diagnostic imaging helps health care providers make accurate decisions about your care. Wait times for diagnostic imaging are based on recent patient experiences and show how long people waited for a service. That way, providers and patients know what to expect and can plan with confidence.

PERCENTILES

Health PEI reports wait times using percentiles, showing how long half of patients waited and how long 9 out of 10 patients waited. This is done in line with the Canadian Institute for Health Information (CIHI) methodology to provide a more transparent picture of current wait times and allow for easier comparison with other provinces.



YOUR TIMELINE EXPLAINED

Diagnostic imaging wait times are measured from the **date your request is received** by Health PEI until the **date your scan is performed**. This does not include the time between your appointment with your health care provider and when they sent the referral.
