Soil Health Analysis Fees

Fees (Please add 15% HST to all Fees)

Packages	Island Farmer**	Non-Farmer or Off-Island Farmer
SH1: Soil Health Package * <ul style="list-style-type: none"> • Soil Respiration • Aggregate Stability • Active Carbon • Biological Nitrogen Availability • Soil Texture 	\$67.75	\$135.50
S3: Detailed Soil Analysis	\$11.00	\$22.00

Rates are subject to review at any time.

*A Detailed Soil Analysis (S3) must also be conducted on the sample(s) in order for a soil health analysis to be completed. Please submit a separate sample for the S3, detailed soil analysis. A separate report will be generated for the S3 sample.

**Island Farmer is defined as an individual or company who is the holder of a valid Farmer Revenue Tax Exempt Permit as issued by the Provincial Treasurer.

Soil Health Sampling Instructions:

1. Gently remove any plant material from the area chosen for sampling.
2. Dig a small hole (approx. 8" deep), maintaining a smooth "wall" along one side of the hole.
3. Remove a cross-section (or "soil slice") approximately 2" wide and 8" deep, using a shovel or spade. Try to maintain a 2" thickness of soil throughout the cross section.
4. Place soil cross-section into a clean container/pail.
5. Repeat steps 1-4 for the entire sampling area. Avoid areas that are unrepresentative of the field (i.e. wet holes, knolls, rocky areas, etc.). Combine all cross-sections to make one composite sample for analysis.
6. Mix all samples together, removing any plant residues, root tissues or rocks from soil sample.
7. Place approx. 4 cups of soil (to fill line) into a labelled soil health bag and approx. 2 cups of soil (to fill line) into a labelled soil nutrient bag.
8. Keep soil sample cool or refrigerated after collection. Do not freeze or allow sample to dry out. Deliver to the PEI Analytical Laboratory as soon as possible (preferably within 24 hours).

"Soil Health Sampling Instructions" are adapted from the **Comprehensive Assessment of Soil Health: The Cornell Framework Manual (3rd Edition, 2016)**.
