Footnotes:

1 Data begin in 1926 for Canada and all provinces except Newfoundland and Labrador for which data begin in 1972.

4 From 1926 to 1970, realized net income is the sum of realized gross income less operating and depreciation charges.

5 From 1971 to date, realized net income plus value of inventory change equals total net income.

6 From 1926 to 1970, total net income equals total gross income less operating and depreciation charges.

7 From 1971 to date, total cash receipts minus operating expenses after rebates equals net cash income.

9 Payments to potato growers for losses sustained as a result of fusarium rot in the 1960 potato crop.

Footnotes

- 3 Less than \$500 is reported as 0
- 5 As of 1992, crop insurance payments no longer include payments under private hail insurance plans.
- 6 Generally, these are programs to deal with usually climatic and/or economic conditions in the agriculture sector.
- 7 As of 2001, receipts from Wool, Pregnant mare's urine, Horses and Embryos are accounted for in Miscellaneous livestock and livestock products.
- 8 Prior to 2001, receipts from grapes and blueberries were included in Other berries and grapes. The categories Other berries and grapes and strawberries, taken together, are equal to Total small fruits.
- 9 The category total small fruits comprises receipts from the sale of numerous small fruits. Blueberries, strawberries and grapes are the major sub-components of total small fruits. Cranberries were added to this table in 2007.
- 10 Included mushroom receipts
- 11 The category total tree fruits comprises receipts from the sale of numerous tree fruits. Apples is one of the components of total tree fruits
- 14 Preliminary farm cash receipts estimates for potatoes are unreliable pending on the availability of administrative data at the end of the crop year.
- 15 Source data for the value of greenhouse vegetables, on a crop year basis, are available in CANSIM table 001-0006.
- 16 Source data for the value of old vegetables, on a crop year basis, are available in CANSIM table 011-0013.
- 17 Source data for the value of fruits, on a crop year basis, are available in table 001-0009.

Footnotes:

- 1 Data begin in 1926 for Canada and all provinces except Newfoundland and Labrador for which data begin in 1972.
- 2 For data prior to 1971 see CANSIM table 002-0015.
- Starting in 1986, the following were combined: cash wages and room and board; repairs to buildings and repairs to fences; fertilizer and lime expense; fertilizer and lime rebates. Starting in 1990, legal and accounting fees were taken out of other expense. As of 1997, hatcheries and farms with only christmas trees became part of the agriculture sector. The
- 3 inclusion of hatcheries has increased all expenses except poultry purchases.
- 4 The total operating expenses after rebates includes all gross operating expenses minus rebates.
- Downward adjustments in the potato commercial seed percentage from 1997 to 2004 and again from 2005 to present have precipitated a break in the series. Hence comparisons
- 5 with previous years are affected.
- 6 The 2012 interest and total operating expenses after rebates items by province and Canada have been corrected.

Footnotes:

The Farm Input Price Index (FIPI) estimates the change in price that farmers pay for inputs into their farming operation through time. A range of administrative price

1 sources are used to calculate this estimate.

Footnotes:

Farm surveys collect data from Quebec, Ontario, Manitoba, Saskatchewan and Alberta at all six survey occasions during the crop year (which extends from the December to the following November occasion). However, data are collected twice a year (in the June Farm survey on seeded areas and in the November Farm survey on final crop production) for Newfoundland and Labrador, Prince Edward Island, Nova Scotia, New Brunswick and British Columbia, which represent between 2% and 4% of national totals. As of July 2014 for the Atlantic provinces and British Columbia, July and September production estimates are calculated using the final estimates of the last three crop years. The harvested area is first estimated based on the ratio obtained from the sum of harvested areas of the last three years over the sum of the seeded areas of the last three years. This average ratio is applied to their 2014 reported seeded acreage from the June 1 survey. This estimated harvested area is then multiplied by the average yield of the last three years to estimate production.

30 Totals may not equal the sum of their parts due to the use of conversion factors or rounding of fractions to whole numbers.

33 All wheat includes spring wheat, durum wheat and winter wheat seeded in the fall.

Footnotes:

Farm surveys collect data from Quebec, Ontario, Manitoba, Saskatchewan and Alberta at all six survey occasions during the crop year (which extends from the December to the following November occasion). However, data are collected twice a year (in the June Farm survey on seeded areas and in the November Farm survey on final crop production) for Newfoundland and Labrador, Prince Edward Island, Nova Scotia, New Brunswick and British Columbia, which represent between 2% and 4% of national totals. As of July 2014 for the Atlantic provinces and British Columbia, July and September production estimates are calculated using the final estimates of the last three crop years. The harvested area is first estimated based on the ratio obtained from the sum of harvested areas of the last three years over the sum of the seeded areas of the last three years. This average ratio is applied to their current year's reported seeded acreage from the June survey. This estimated harvested area is then multiplied by 1 the average yield of the last three years to estimate production.

31 Totals may not equal the sum of their parts due to the use of conversion factors or rounding of fractions to whole numbers.
