

ENERGY EFFICIENCY SAVINGS FOR FARMERS

For farm operations, energy efficient equipment will reduce your energy costs.

Incentives

Investing in energy efficiency will reduce your energy consumption and help you manage your operating costs.

Farm operations are eligible to receive rebates for upgrading to energy efficient LED lighting and energy efficient equipment like heat pumps.

Harnessing the sun

Going solar can lower energy bills for your farming operation, working hand-in-hand with other efficiency upgrades.

- \$350 /kilowatt installed, up to 40 per cent of installed costs, to a maximum of \$10,000
- Financing is available through the Government of Prince Edward Island to assist with up-front costs of solar installation.
- Get started by finding a Network of Excellence solar installer near you.

For your home

Energy efficient programs are not just for your farm, but also for your home. You can reduce your energy consumption, increase savings and reduce your carbon footprint.

- Heat pumps provide efficient warm air in the winter and cool air in the summer. Rebates on heat pumps can be as high as \$2,400
- Rebates are also available for other types of heating systems like propane and biomass
