SCHEDULE B

STANDARDS FOR WELL CONSTRUCTION EQUIPMENT, MATERIALS AND DEVICES

The following organizations' standards are prescribed for the purposes of subsection 8(2):

American Society of Testing Materials - ASTM

American Water Works Association - AWWA

Canadian Standards Association - CSA

National Sanitation Foundation - NSF

SCHEDULE D

METHODS FOR DISINFECTING WATER WELLS

A well driller shall clean and disinfect all drilling tools before drilling a well to prevent the spread of contamination from previous jobs or from the ground surface at the new well site.

Pursuant to clause 13(8)(b) of the regulations, a well must be thoroughly disinfected before it is placed into operation. The most commonly used

methods involve chlorine, either in liquid or tablet form. The approved methods are indicated by the case descriptions below. Chlorine should always be used in a well-ventilated place, because breathing the fumes can be hazardous to a person's health.

CASE A - WELL HOOKED UP TO A PLUMBING SYSTEM

1. Mix 1 litre of liquid laundry bleach or chlorine with approximately 45.5 litres (10 gallons) of water. Pour the solution directly into the well by removing the well seal or the well cap.
2. Open all faucets in the system and let the water run until the chlorine odour or taste is detected. Turn water off and repeat step #1 with a second chlorine solution.
3. Let the system sit for a minimum of 8 hours, and preferably overnight.
4. Discharge water from all outlets until the chlorine odour and taste has disappeared. Faucets or fixtures discharging to septic tank systems should be temporarily diverted to an outside discharge point to avoid overloading the disposal system.

CASE B - AFTER WELL COMPLETION

1. Mix 1 litre of liquid laundry bleach or chlorine with approximately 45.5 litres (10 gallons) of water.
2. Pour the solution into the well, secure the well with an approved well cap and let the system sit for a minimum of 8 hours, and preferably overnight.
3. Depending on the length of time between pouring the solution in the well and the installation of the pumping equipment, the chlorine will either move on with groundwater flow or be removed when the pump is hooked up to clean the well.

SCHEDULE E

METHODS FOR FILLING ABANDONED WELLS

Abandoned water wells, if left open or if insufficiently covered or filled, can be a potential source of groundwater contamination. In addition, wells dug by hand pose a potential safety hazard to the public, livestock and wildlife. The methods described below are methods approved by the Department for the abandonment of water wells as required by section 12 of the regulations. Drilled wells must be abandoned by a licensed well contractor.

Drilled wells

All obstructions in the well must be removed prior to filling the well. The well should then be filled with alternating layers of bentonite or cement and clean fill (clay till or sand). The bottom 3 m (10 feet) of the bore hole must be filled with the bentonite or cement. The thickness of the individual layers of bentonite shall be not less than 0.3 m (1 foot) thick. The thickness of clean fill layers shall not exceed 1.5 m (5 feet).

This plugging procedure is intended to prevent the vertical movement of contamination down the well bore hole. In addition, if the portion of the casing which is above ground becomes an eyesore or a safety concern, it can be cut off below the ground surface.

Dug wells

Any obstructions in the well (piping, pump, wooden material, etc.) must be removed prior to the plugging of the well.

The well shall be filled to within 1 m (3 feet) of the ground surface with a mixture of sandstone and clean fill material. A minimum 0.15 m (6 inches) thick layer of a low permeability material such as bentonite or compacted clay must be installed within 1 m (3 feet) of the ground surface to prevent the entry of surface water to the water table.

The surface area of the top of the well must be covered with topsoil and graded in a manner that will allow drainage away from the well.

EXPLANATORY NOTES

SECTION 1 revises some definitions and adds new ones.

SECTION 2 changes a heading, specifies the requirements for a well driller to obtain a license, and increases the term of a license from one to two years.

SECTION 3 removes the heading of and provisions for a Water Well Advisory Board and adds provisions respecting a well contractor's license.

SECTION 5 provides that a well permit is not required for an area where a groundwater exploration permit is required.

SECTION 6 deals with the requirements for a groundwater exploration permit.

SECTION 7 changes a heading and deals with a groundwater extraction permit.

SECTION 8 deals with the standards of equipment and materials used in constructing a well.

SECTION 9 deals with setback distances for a well and adds a requirement that contaminant sources must not be constructed or located nearer than the setback distances.

SECTION 10 deals with the installation of well casing and grout.

SECTION 11 deals with well completion requirements.

SECTION 12 deals with abandonment of a well.

SECTION 13 deals with pump installation and clean-up.

SECTION 14 amends the Schedules.
