

Recommendations of the inquest into the deaths of Danielle White and Olivia Rodd

Inquest Dates: December 6-7, 2021 and February 24th 2022

- Chronic mental health patients with multiple interventions should receive long-term monitoring and support. In cases where children are involved, mandatory enhanced monitoring and reporting is recommended.
- The Bridge Program appears to be well intended, however the threshold for identification should be lowered for higher risk individuals.
- Child Protection Services should have increased communication with the other parent or guardian so enhanced, informed and appropriate decisions can be made.
- Police Services should review procedures in cases of potential suicidal tendencies to report any findings to other authorities.
- An increase in mental health awareness training could benefit all organizations involved in any wellness checks.
